PROJECTS

Developer Connector
A LinkedIn inspired single-page web application that connects Software Developers through searching capabilities to find other developers in the application
- Built back-end database with MongoDB
- Used Passport to authenticate users using JWT
- Developed front-end using React enabling developers to have profiles, news feeds, comment on and like posts, etc.

Weather App
Displays the weather of the location the user searched for by accessing the OpenWeatherMap API
- Built back-end service and interface that communicates with OpenWeatherMap API
- Used Angular for front-end development and design
